---

[i] CommVault's Simpana software provides replication, requires third-party hardware target

[ii] Double-Take's host-based software provides replication only, backup to disk target requires third party hardware

[iii] Microsoft's DPM provides remote replication, but with limited compression and encryption capabilities without third-party products

[iv] Symantec's NetBackup and PureDisk together provide data deduplication in the backup software

[v] Symantec's NetBackup provides API support for D2D and software support for replication
