# Agenda

- Stop the madness - why are we doing this?
- The goal of compliance
- Critical program elements
- Creating flexibility
- Specific topics
- Eyeing the horizon
- Q&A

## Why are we doing this?

If your compliance management program is about ticking off a list of controls, you're in big trouble.

Compliance management, as one aspect of risk management, is about risk alignment, not risk elimination, and definitely not about checklists.

---

Ultimately risk management comes down to three things:

- **Awareness**
- **Accountability**
- **Action-ability**

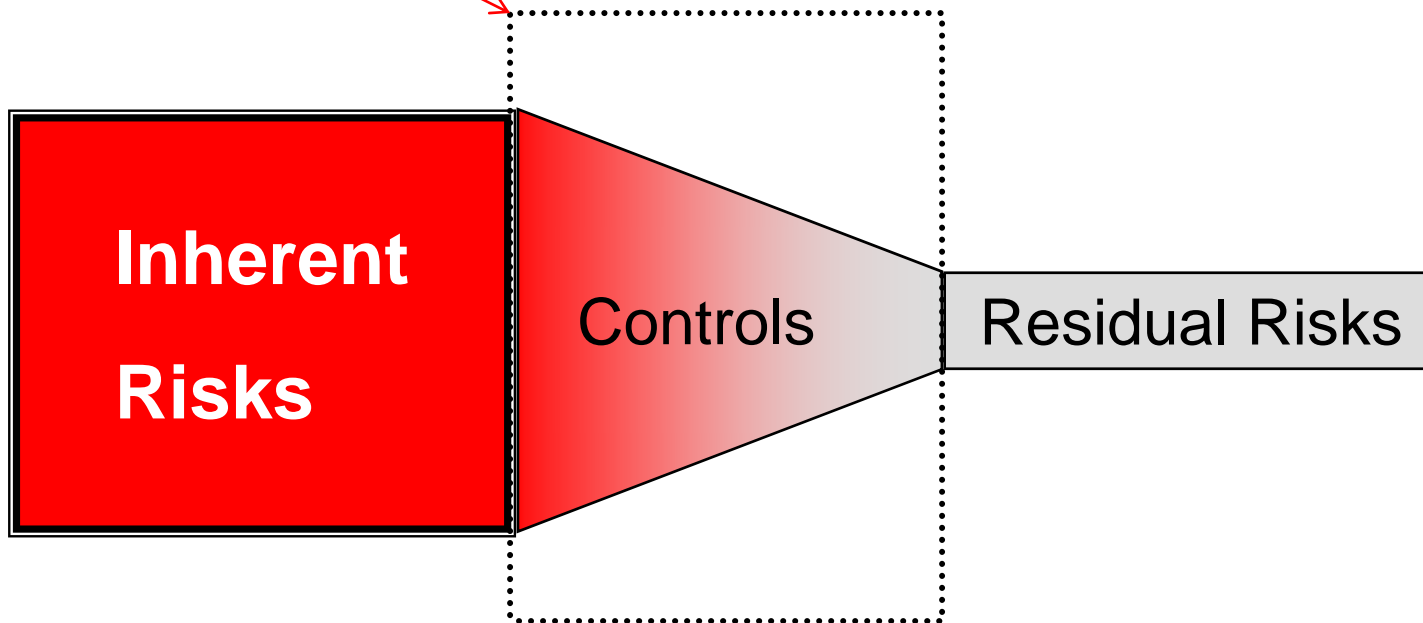

# Risk Alignment

- Mapping guidance to risk
- Mapping risk to controls
- Mapping controls to a process
- Mapping a process to people

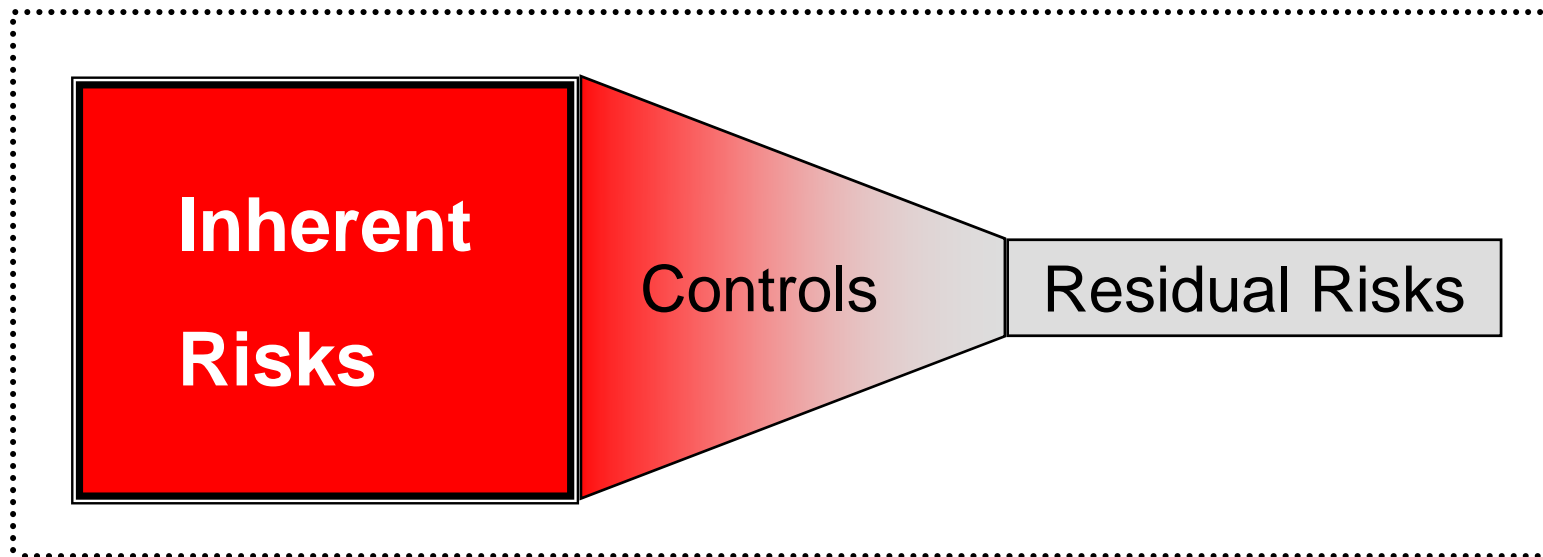

# The Risk Continuum

Compliance?

# The Risk Continuum

Compliance Management!

## Key Elements

- Subject matter expert
  - Compliance committee (real or virtual)
  - Control library – visibility!
  - Documentation!!!
  - Risk-aware culture
  - Incident response team
  - Wrap-around analysis
-

## How We Did It

- Never started from scratch
  - All new/changed laws/regs mapped first
  - Gap analysis against existing controls/reports
  - What's required, control or documentation?
  - Determined business responsibility
    - Particularly critical for IT based requirements
  - Visibility is the key
  - Leverage exiting policies, controls & docum.
  - Never forget that we have a business to run
-

## GRC?

- Buzzword or not, governance, risk and compliance are inextricably linked
  - GRC strength lives and dies on the risk culture
  - Requires more end-to-end management
  - Compliance is too-often siloed, GRC is holistic
  - Compliance must be managed as a part of the risk continuum, NEVER a standalone process
-

## GRC Best Practices

- Executive awareness program should focus on “Are we managing risk?” more than “Are we in compliance?” One follows the other.
    - This means setting risk tolerance
  - Executive sponsorship is invaluable
  - Strive for end-to-end process maps
  - The value of a control library (risk mapping)
  - Don't let everyone's responsibility become no one's responsibility
-

## Notes on Topical Areas

- Information security / privacy
  - Business continuity planning
  - Data retention – eDiscovery
  - Vendor management / outsourcing
  - Financial: remote deposit capture
-

# The Crystal Ball

- The good news – not much brewing!
- Always info security and BCP
- Less controls – could it be?
- Doing more with less
- Resiliency!

Remember...

**Awareness**

**Accountability**

**Action-ability**

---

## Questions / Discussion
