

Winning the War on Worms

Pete Lindstrom, CISSP Research Director

Spire Security, LLC www.spiresecurity.com petelind@spiresecurity.com

Business impact

- Why do I care?
- How do I measure the impact/significance of worms?
- How do worms compare as a threat to other types viruses, spyware, targeted hacks, etc?

General threat questions

- With no large worm outbreaks recently, what is the threat?
- What is "wormability"?
- What techniques are used for worm propagation?
- How long could "the Internet" be down for?

Features

- Performance
- Ease of use
- Manageability
- Suitability to task

• Intrusion revention techniques

- What detection methods are there?
- Which ones are the most useful?
- How are worms evading detection?
- How can we get smarter about worm detection? (or, are we smart enough?)

IPS Architecture

- What are the performance constraints?
- How does IPS fit in at the perimeter?
- Where else should I put IPS?
- How does it integrate with network devices?
- Should we be thinking about multifunction security gateways?

Agree? Disagree?
