

Executive Briefing

nullcon Security Conference, Delhi 2012

[SearchSecurity.in's](#) photo-feature on nullcon Delhi 2012,
[28th Sept](#) & [29th Sept](#)

Name: Neil Sikka

Organization: Microsoft

Topic Name: Microsoft EMET Exploit Mitigations

Vulnerability: None. EMET is a vulnerability independent defense tool that mitigates common exploit techniques/behaviors.

Tech details: Easy to deploy (Group Policy Objects/System Center Configuration Manager) and monitor (Event Logging). Does not require rebuilding/redeploying of protected applications.

Impact: Enterprise customers can defend their organizations from exploitation of vulnerable software that has already been deployed, and preemptively defend their organizations from exploitation of 0day vulnerabilities. EMET is free for customers.

Mitigation: Multiple Techniques

Microsoft
