Low Cost Technologies and Approaches in Storage Networks

Marc Farley
President, Building Storage Inc.

Storage Decisions

Hosted by STORAGE SearchStorage.com

"Preferred" Storage is Expensive

- **Top-tier, high margin vendors have been the most successful.**
 - EMC
 - Network Appliance
 - IBM
 - HPQ
 - Hitachi
 - Q Logic
 - Emulex

Storage Decisions

Comparing Server & Storage Costs

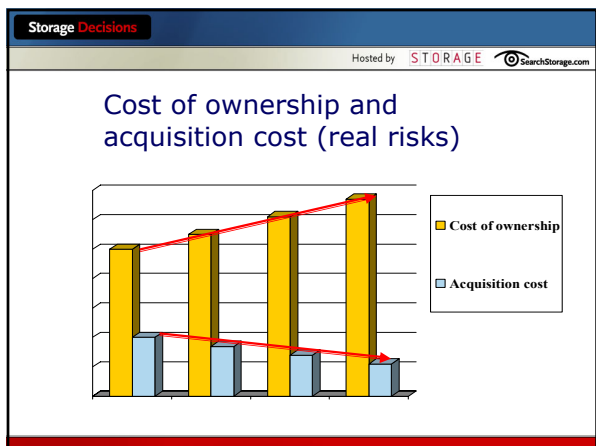

Category	Relative Cost (in \$1000s)
Unix Servers	High
Network Storage Subsystems	Very High
PC Servers	Low
PC Desktop Storage	Very Low

Solution Cost in \$1000s

- Unix Servers
- Network Storage Subsystems
- PC Servers
- PC Desktop Storage

Products and Infrastructures

Products	Infrastructures
<ul style="list-style-type: none"> ● Cheap to purchase ● Easy to install ● Cheap or costly to own ● Stand-alone or integrated 	<ul style="list-style-type: none"> ● Costly to purchase ● "A process" to install ● Cheap to own ● Integrated

"Instant Infrastructure" Products (PBX approach, IBM SVC for example)

- Stability
- Flexibility
- Automation
- Beyond-Big Scalability
- Aggregation

Storage Decisions

Hosted by STORAGE SearchStorage.com

Lowering The Cost of Storage

- Less expensive components
- Less expensive subsystems
- Recycling
- Lower cost architectures

Storage Decisions

Hosted by STORAGE SearchStorage.com

Component Alternatives

- SATA, ATA disk drives
- iSCSI / Ethernet
- Linux / Open Source Software

Storage Decisions

Hosted by STORAGE SearchStorage.com

ATA Disk Drives

- **ATA – designed for desktop use**
 - 7200 RPM : 250 GB : 133 MB/sec (Try short-stroking)
 - No overlapped I/O, no command queuing
 - Mysterious “sleep” states during housekeeping
 - Low I/O rate systems & applications (email)
 - Reduced duty cycles
 - OK for disk backup, archiving & ILM
 - Connection-constrained
 - 2 drives per controller
 - Not designed for hot swapping

Storage Decisions

Hosted by STORAGE SearchStorage.com

SATA Disk Drives

- **SATA – desktop + server + network**
 - 10,000 RPM : 74 GB : 150 MB/sec
 - Native Command queuing – only 1 device per controller
 - Low I/O rate systems & applications (same as ATA)
 - Mysterious “sleep” states during housekeeping
 - Some have improved duty cycles
 - Future improvements for more applications
 - Connection improvements
 - 1 drive per connector, small connectors and backplane-ready, built for hot swapping

NAS vendor solutions

- Support can be invaluable
- Integrated data management (snapshot, backup) can be incredibly valuable
- Integrated Connectivity (hot swapping)
- Is it infrastructure?
 - Probably not, but they can be terrific products

DIY NAS with (S)ATA

- Buy a system chassis, CPU, motherboard
- Buy disk controller & drives (3Ware ATA controller?)
- Buy server software
- Figure out how to back it up

DIY NAS cost estimate

- 24 drive, PC NAS system
- Hot swap disk, fans, power supplies
- \$4000 – system hw
- \$4800 – disk drives
- \$1500 – software
-
- \$10,300 for 2.4 TB (RAID 0+1) to 4.4 TB (RAID 5) of NAS with very good performance

Storage Decisions

Hosted by STORAGE SearchStorage.com

iSCSI Storage

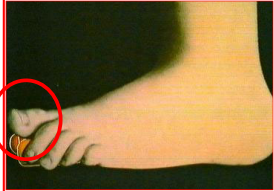

- **iSCSI systems to iSCSI storage**
 - Slow but steadily growing # of storage suppliers
 - DIY is on the edge (Target software on PCs)
 - Datacore, Ardis, String Bean Software, Wasabi
- **iSCSI systems to FC storage**
 - Leverage FC infrastructure investment
 - Requires iSCSI to FC router (i.e. Cisco, SANRAD)

Storage Decisions

Hosted by STORAGE SearchStorage.com

iSCSI, Gigabit Ethernet and TOE

- **iSCSI and TOE**
 - The requirement for TOE is overblown.
 - PC systems with >2.4 Ghz processors don't need it.
 - GbE NICs are virtually free.

Storage Decisions

Hosted by STORAGE SearchStorage.com

Linux & Open Source Software

- **Linux enterprise distributions**
 - RedHat, Debian, Suse, Gentoo
- **Linux Volume managers**
 - Sistica
- **Linux file systems**
 - GFS, XFS, Reiser, AFS

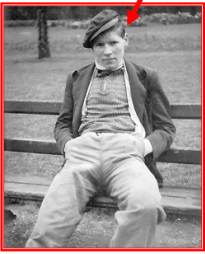

Storage Decisions

Port Oversubscription for PC (slacker) Systems

- How much I/O will PC systems actually create?
- How much I/O does the application need?

Storage Decisions

Hosted by STORAGE SearchStorage.com

Single Connection SANs: When Redundancy is just overkill

- Redundancy in PC systems is often covered at the system level.
- Dual HBAs in every server costs a lot.
- SAN reliability is very good.

Storage Decisions

Hosted by STORAGE SearchStorage.com

Single Connection SANs

- The main exposure is the loss of a switch.
- Switches rarely fail.
- Line cards can fail.
- Limit exposure by using multiple, smaller switches (8-ports) in single connection SANs.

Storage Decisions

Hosted by STORAGE SearchStorage.com

Cost-Effective Management

- **Plan to leverage storage.**
 - Storage at the center, not switches
- **Leverage existing skills and standards.**
- **Change management, provisioning**
 - Coordinating zoning. LUN masking and multi-pathing requires automation
 - Onero, App IQ

Storage Decisions

Hosted by STORAGE SearchStorage.com

Recycle Storage

- **Aging storage can be re-purposed.**
- **Used equipment can be an amazing bargain.**
 - HBAs on e-Bay for \$25
- **4-year-old storage is not spent.**
 - But disk drives may need to be replaced
